Welcome

On behalf of the entire Organizing Committee, we are delighted to welcome a record number of participants to Chicago for the 9th International Conference of the Learning Sciences. The ICLS 2010 program, with its theme Learning in the Disciplines, features a broad range of keynotes, symposia, papers and posters that will engender an exciting exploration of important issues in the learning sciences, disciplinary and professional learning. In addition to keynotes by three pre-eminent scholars in their fields - Carl Wieman, Koeno Gravemeijer, and Pam Grossman, and five invited, theme-related symposia, the schedule contains 149 papers, 25 multi-paper symposia, 7 poster symposia and 109 posters. All of that preceded by 8 pre-conference workshops plus the Doctoral Consortium and Early Career Workshop. We anticipate that the ICLS 2010 Conference week will be packed with engaging and informative discussions and exchanges on critical issues in learning, teaching, instructional and materials design, technology, assessment, and evaluation.

The conference location at the historic Palmer House Hilton Hotel puts you in the heart of Chicago's loop with access to numerous cultural and entertainment venues as well as excellent restaurants and shopping. Just a few blocks away from the Palmer House you will find the Art Institute of Chicago and its recently opened Modern Art Wing designed by Enzo Piano. Just across the street from the Art Institute and across Michigan Avenue is Millennium Park with its iconic sculptures, gardens, fountains, and the Pritzker Music Pavilion designed by Frank Gehry. Coinciding with ICLS 2010 is Taste of Chicago, an annual event that offers a variety of free musical performances and lots of places to sample foods from vendors throughout the city. Your registration packet contains a variety of informational materials and maps that elaborate on the many attractions of Chicago, including a restaurant list. Hopefully, you'll find some time to enjoy the wonders of Chicago's downtown and loop area just outside your hotel doorstep.

A conference of this magnitude does not happen without the hard work of many individuals. This one is no exception. We have been most fortunate to collaborate with a super Conference Organizing Committee. We are deeply appreciative of the countless hours, tireless effort, and energy that they have dedicated to all aspects of this Conference. We especially want to acknowledge the Learning Sciences Research Institute's Associate Director, Deana Donzal, who took on the role of Business Manager for the Conference and navigated the complex web of contracts, financial arrangements, and details associated with this event. Finally, other LSRI staff and graduate student volunteers from the Learning Sciences programs at UIC and Northwestern have been working behind the scenes to prepare for this meeting and will be available to assist you throughout the Conference. (Look for the folks in Conference Staff shirts!)

The Conference is also fortunate to have a number of sponsors whose material support is contributing to several major conference events, including the Keynote speaker series, the Doctoral Consortium and Early Career Workshop, the evening receptions, and a major social event on Thursday. And in the priceless category: ICLS2010 – There's an App for that – thanks to Inquirium LLC.

But you can't build a conference unless there are people interested in and willing to co-construct it. To all of you our deep thanks for contributing to what we hope will be a very successful conference that attests to the presence and impact of the learning sciences community. In celebration of that community we invite everyone to join us Thursday evening in the Preston Bradley Hall of the historic Chicago Cultural Center for an evening of music, food, drink and dancing.

Welcome to Chicago and ICLS 2010

The Learning Sciences And Learning In The Sciences— The Perspective From Post-Secondary Science Education

TUESDAY 4:00-5:30PM, RED LACQUER BALLROOM

Over the past few years Dr. Carl Wieman has become increasingly involved with trying to improve undergraduate physics education and has been balancing his time between that and his research. He has been examining alternative curricula and learning about the research in physics education as to how students do and do not learn. A particular concern has been improving how physics is taught to students who are not planning to become physicists, in the hope of one day making physics understandable, useful, and interesting to a large fraction of the population. His efforts have ranged from working with national organizations pursuing widespread change in undergraduate physics education to developing useful innovations in the individual courses that I teach. Because of his particular concerns, these courses have lately been large introductory courses primarily for nonscience students. Wieman currently serves as Chair of the Board on Science Education of the National Academy of Sciences. In 2007, Wieman was awarded the Oersted Medal, which recognizes notable contributions to the teaching of physics, by the American Association of Physics Teachers (AAPT). In 2004 he was named United States professor of the year. He was awarded the Nobel Laureate in Physics in 2001.

Dr. Koeno Gravemeijer

Professor of Science and Technology Education
Eindhoven School of Education
Eindhoven University of Technology

Instructional design, theory and practice in mathematics education

THURSDAY 8:30-10:00AM, RED LACQUER BALLROOM

Dr. Gravemeijer currently is Professor of Science and Technology Education at the Eindhoven University of Technology. Earlier he was affiliated with the Freudenthal Institute of Utrecht University, and with Vanderbilt University. At that time his primary focus was on mathematics education. His research interests focus on curriculum development, instructional design, domain-specific instruction theories (such as the theory for realistic mathematics education, RME), teacher professional development, and students' use of symbols and modeling. In relation to the latter he developed the 'emergent modeling' design heuristic. His interest in instructional design is not only theoretical. He headed a team that developed a textbook series for primary school, in the Netherlands, and he was part of the group that developed the NSF-funded, Middle School, textbook series, 'Mathematics in Contexts'. His current research involves using design-based research to develop local theories of instruction as a means to understand and support learning processes.

Dr. Pamela Grossman

Nomellini-Olivier
Professor of Education
Stanford University

Learning to Ponder: The Puzzle and Pleasure of Literary Text

FRIDAY 8:30-10:00AM, RED LACQUER BALLROOM

Pam Grossman is the Nomellini-Olivier Professor of Education at the Stanford University School of Education. Her research interests include teacher education and professional education more broadly, teacher knowledge, and the teaching of English in secondary schools. Along with her colleagues Don Boyd, Hamilton Lankford, Susanna Loeb, and James Wyckoff, she has been engaged with a five year study of pathways into teaching in New York City schools, focusing on the features of preparation that affect student achievement. She is currently investigating the classroom practices of middle-school English teachers that are associated with student achievement. She is the co-Principal Investigator of the Teachers for a New Era project at Stanford, funded by the Carnegie Corporation, and is the Faculty Director of the new Center to Support Excellence in Teaching. A former high school English teacher, Grossman also teaches the prospective English teachers in Stanford's teacher education program.

The Spencer Foundation was established in 1962 by Lyle M. Spencer. The Foundation received its major endowment upon Spencer's death in 1968 and began formal grant making in 1971. Since that time, the Foundation has made grants totaling approximately \$250 million. The Foundation is intended, by Spencer's direction, to investigate ways in which education, broadly conceived, can be improved around the world. From the first, the Foundation has been dedicated to the belief that research is necessary to the improvement in education. The Foundation is thus committed to supporting high-quality investigation of education through its research programs and to strengthening and renewing the educational research community through its fellowship and training programs and related activities.
